

Oct 4-1973

Mr. Campbell

Dear Norm:

I received your letter today. I was sorry to hear from you. I have been very busy & I didn't realize that its been a month since I last spoke to you. I am very sorry I hadn't written, but we are progressing rapidly for the footage on our turn is 236 ft. in one month. At the footage of 50 ft we hit our fault line which was about a ft. wide. Last night Oct 3rd. midnite after black we encountered another fault line the fault, 227 ft. which that fault line measured a ft + 1/2. I am so glad you good people of Kona Island if you all are with me & keep your fingers crossed I'm doing anything I can to get to the main cavern that I know there. Norm I'm sending a sketch of the tunnel you understand it its the best I can do right now. I am going to send you a wobbly report now so that all the people there will be know whats going on from now on. It seems to Mr. Campbell has let us down in keeping people informed about anything else, and you is doing his very best in the conversion from the to stack. I've been informed by the Ho

to we are very close to get our formal.
in you don't know what great pleasure it gives me
know that the people in Tuvalu island are one
and percent behind me this way I feel that
we are not alone in the project.

Now about the papers you yourself can
use a paper typed out to the way you see best
instance this is an example.

I _____ give my papers to Richard
nandy

This is the way I would do it I collect the
minutes you should like to send to me.

be one copy and have it corrected sorry
at the speaking but you know what I mean.
me I appreciate your unofficial representation out
er but we all have to do our part whether
or small. I know we have to keep going no
ted what to reach our goal I know your doing
re then some members of the board & you
be recognized for it I promise you that.
Well, I guess I'll close hoping you
are this letter real soon say hello to your family.
I hope an answer from you real soon.

Sincerely
Dick Demaree
