

KOKOWEEF PEAK,
MTN. PASS, CA

..... center stage for the legendary "River-of-Gold"

NEW MAGNETOMETER SURVEYS SHOW THE **BEST** PLACES TO *Drill, Drill, Drill !!!*

TEN DRILLS !

Jim Hanhardt brokered an excellent deal for 3 more diamond drills, with accessories, from the Homestake Mine in South Dakota. The hard part came when he and Wayne Haskell muscled them on and off elevators from 6,800 feet below the surface! Thanks men ! What a way to spend your time off !

At first, thoughts centered around diamond drilling at the east end of the basecamp. However, discussions with Mr. Hewitt quickly led us to realize only very limited information was available for the 5 acre site. So, rather than drilling for the love of drilling, just to "get lucky", we

opted to do more electronic surveys to find the absolute **BEST LOCATION** under the basecamp. As luck would have it, Mr. Hewitt had his new **magnetometer**. He wanted to test how well it would detect four **KNOWN** caves on Kokoweef with different sizes, shape and depth. The results were outstanding! **Geo-Western's magnetometer precisely located all four known caverns with the largest readings (negative-numbers) directly over the center of each cave !**

GO ! GO ! GO !

These results led us into a flurry of **unscheduled magnetometer** surveys over "hot spots" of the previous **electronic** surveys. Many electronic targets were re-confirmed as likely, but unknown, caverns. One high-resistance (electronic) target was scientifically eliminated as being mineral and not cavernous. This knowledge keeps us from losing precious time, money and volunteer effort while we go directly for the real ones.

WHAT'S NEXT ?

This recent turn of events does **not** shift our attention from the major indication for deep caverns featured at last year's picnic. The ongoing diamond drilling projects, Triangle Map area and the Rusty Red Hole will remain focused toward that same goal. In fact, magnetometry strongly indicated the electronic targets at the higher elevations on Kokoweef are probably caverns rather than impassable, high-resistance minerals. *That's encouraging but there's more !!!*

CATHY'S CAVE

Another electronic target was re-affirmed and then upgraded in status using magnetometry. Surveys show two long, linear patterns mapped over 2,300 feet from Cathy's Cave to the basecamp! Just below Cathy's Cave (see next page), the main, hidden cavern potential appears to be larger, deeper and longer than the

known Kokoweef Cave! If we physically prove it's exists through diamond drilling and video camera probes, then it's worth the expense and effort of tunneling. Next, the descent team could inspect if passages go safely down under the basecamp. If so, a laser survey by Jim Hanhardt would guarantee success for the **first** drill hole at the basecamp!

Back in 1940, (59 years ago) there may have been many good reasons Earl Dorr proposed starting a tunnel to go under Kokoweef Cave which is very near what is now Cathy's Cave. **But it was never started.**

We know Cathy's Cave has measureable air flow. We also know, from past well drilling at basecamp, that 1200 c.f.m. of air was pumped and lost down a crack, over 250 feet below the surface. It didn't build up a bit of back pressure in over 5 minutes !

We believe the magnetometer mapping reveals two cavern tubes linking these two locations. If so, it may be the **gradual** passage, leading down and under the basecamp, to the deep and hidden underground canyon and Earl Dorr's legendary "River-of-Gold."

TODAY WE HAVE MAPS !

We know where and how to search.

ALL THAT'S LEFT TO DO IS ...

Drill, Drill, Drill !!!

V.G. "Gary" Hewitt, President of Geo-Western, pauses while conducting magnetometer surveys near the basecamp. We can all be thankful for his prompt, professional services.

Our 1999 Annual Picnic & Business Meeting Begins 9AM on Sunday, June 6th at Kokoweef.

Local investors: Please bring your favorite pot-luck picnic recipes !

The company will furnish sodas, hot dogs, hamburgers, buns and condiments

Bring jackets, sweaters, sunscreen, binoculars & plenty of film

This year there's a special treat with **outdoor music** by the Henry Broussard trio.

EXPLORATIONS INC. OF NEVADA

This newsletter is a reminder to all Investors that their investments are needed and appreciated. We publish three times a year to keep **active** Investors advised of the progress being made at Kokoweef Peak in the ongoing search for the legendary caverns. We need your positive involvement, encouragement ... and **monthly participation.**

CATHY'S CAVE *LEAPS* BACK INTO THE SPOTLIGHT !

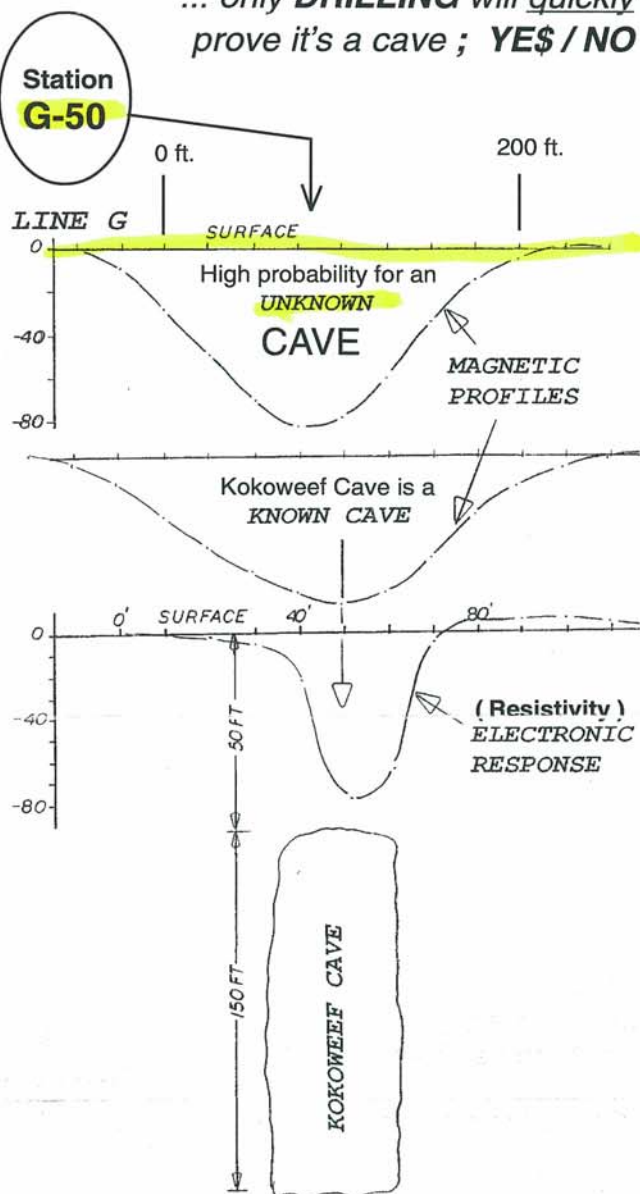

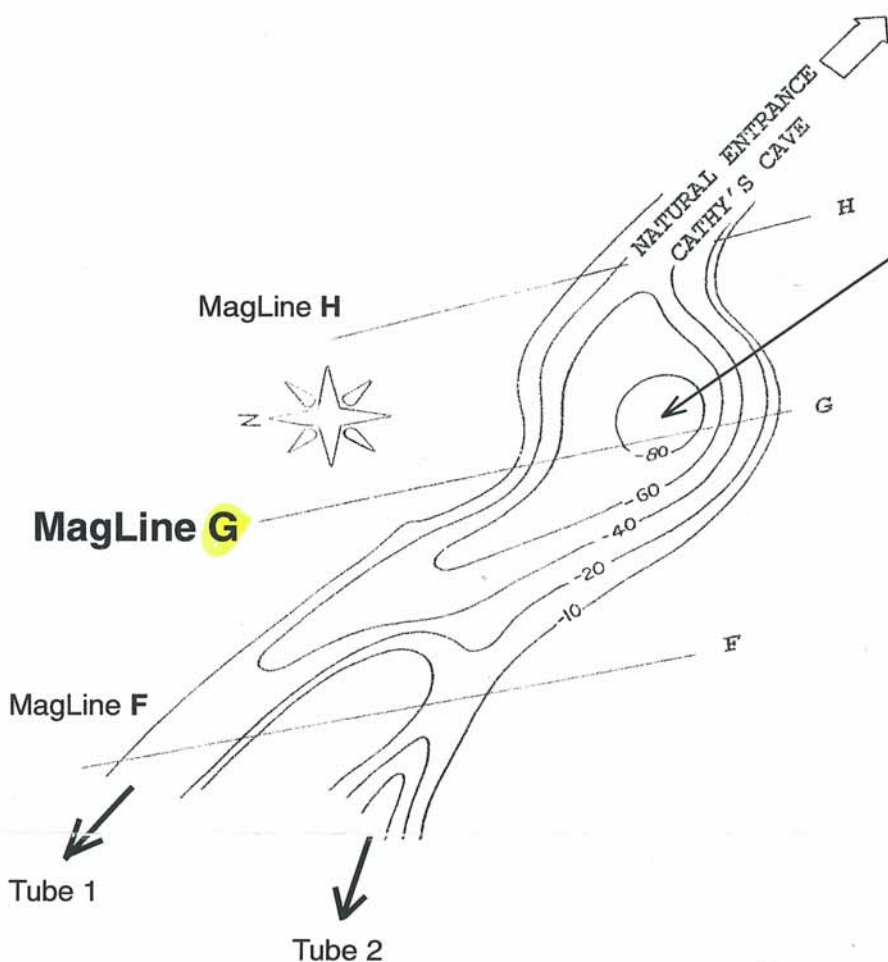

..... MAGNETOMETER GUIDES FUTURE DIAMOND DRILLING PROJECTS

TESTING OVER 4 *KNOWN* CAVES SHOWS THE **BEST** PLACE FOR UNKNOWN CAVES IS UNDER THE MAPPED NEGATIVE NUMBERS.

(X) CATHY'S CAVE ... a Golden Egg ?

SIMILIAR negative-number RESPONSES over the *KNOWN* Kokoweef Cave and the *UNKNOWN* geology below Cathy's Cave are **STRONG** indications for a "golden egg" at station G-50 !

... only **DRILLING** will quickly prove it's a cave ; **YES / NO**

ABOVE MAP is a **BIRD'S EYE VIEW** plotted from 3 Magnetic Survey Lines

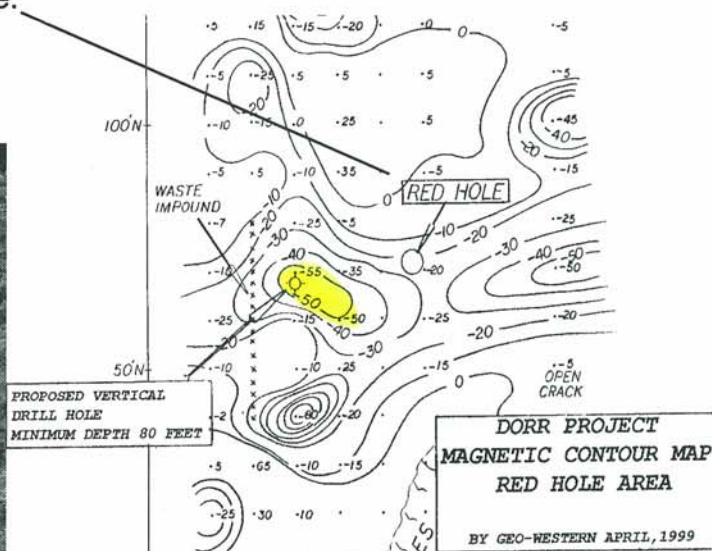

ABOVE: Mr. Hewitt begins a Bird's Eye V view map of early magnetometer results around the Red Hole.

BELOW: "Hello!" Jerry McKee waves from the new trails going up to the diamond drill site at the EM-83 / Brushy Area . Drill site G is lower, at the left center, & drill probes have found voids with AIR FLOW !

ABOVE : Vertical magnetic & electrical distortions over a **known** cavern suggest **similiar** responses in **new** locations should be caverns as well.

BELOW : In a Bird's Eye View mapping, groups of larger **negative numbers** show possible paths for hidden cave passages. **DIAMOND DRILLING** is the **efficient** way to explore for these new cavern sites.

CRESTLINE OF KOKOWEEF'S WEST RIDGE

Two "triangle markers".
The top one is **elevated**
by 3 stones put under it.
Each boulder is several
hundred pounds!

Drill Site G-68
"The Brushy Area"

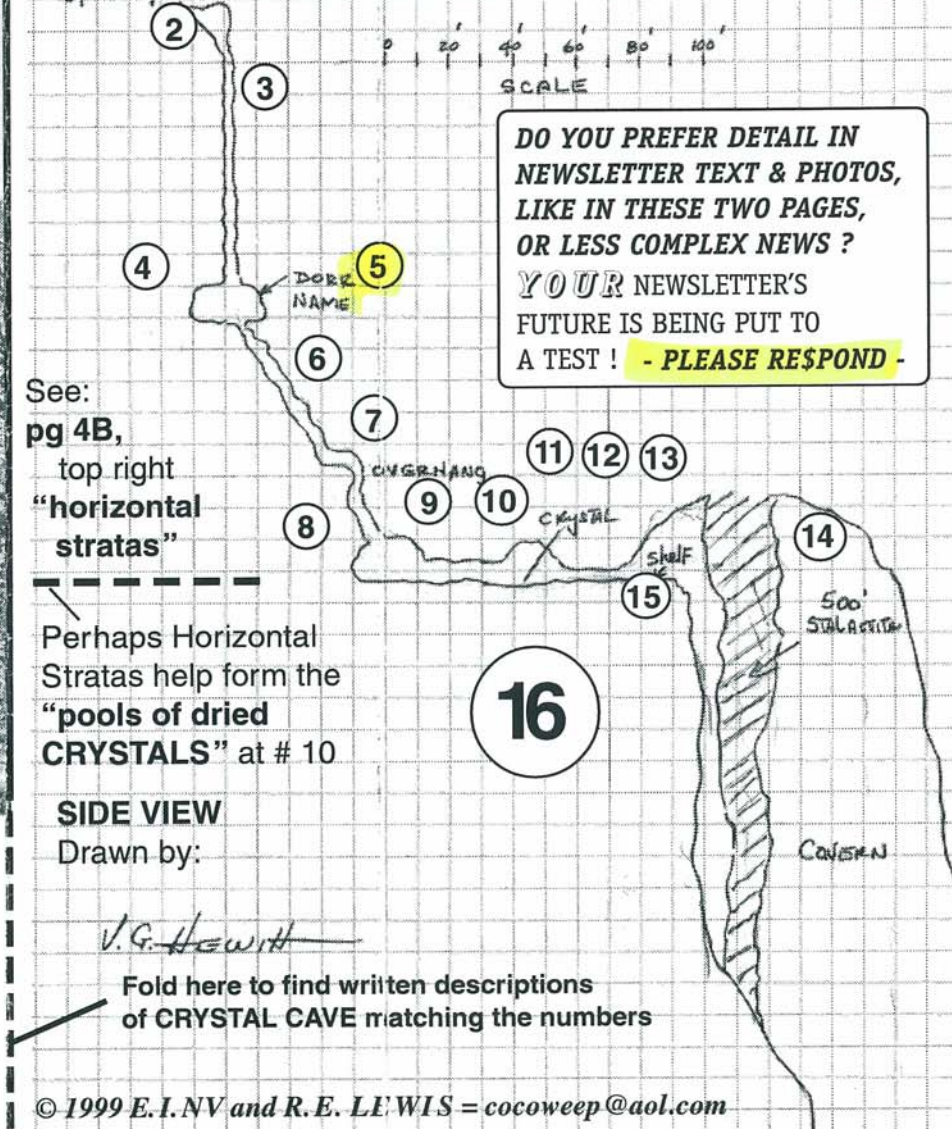

IN THE BEGINNING ... at any entrance ... there first
has to be **GEOLOGICAL STRUCTURE** for the cracks,
passages and caves to form along. The visible, **major
fault structures** in and around the "Brushy Area" are
not a guarantee for passages, but certainly show com-
pelling evidence for a hidden possibility. Two are shown
by dashed lines - plus how they may relate, in the lower
drawing, to a description for "Crystal Cave's passages."
GEOLOGY + MARKERS = CURIOSITY!

WHERE'S CRYSTAL CAVE'S PASSAGEWAY?

Earl Dorr's relatives agree their uncle may have put folks off the track
of **HIS** original entrance. This would **PROTECT HIS INTERESTS** for
what was at stake on property he didn't own. **They believe his re-
ports of the cavern are possible.** The diagram below is a drawing
based on a written description in the July, '70 issue of True Treasure by
Al Masters.

If the author's facts are correct, his story does not
match features seen in the old, familiar Crystal Cave
on Kokoweef's **EAST** side, so common sense says:
"It's possible THE CAVE is still hidden!"

We MUST keep our Explorations\$ GOING!
ALL CRYSTAL CAVES ARE NOT EQUAL

closures

"Almost every significant breakthrough is
the result of a courageous break with
traditional ways of thinking."

Stephan R. Covey in
Principle - Centered Leadership

The fine print: ... Ralph will accept the blame if we find nothing significant relating to the "triangle - markers."

We NEEEEEEED the SeeSnake™ camera & your \$teady help to keep our progress rolling!

Every small investment is like dynamite ...
..... A LITTLE BIT
GOES A LONG WAY!

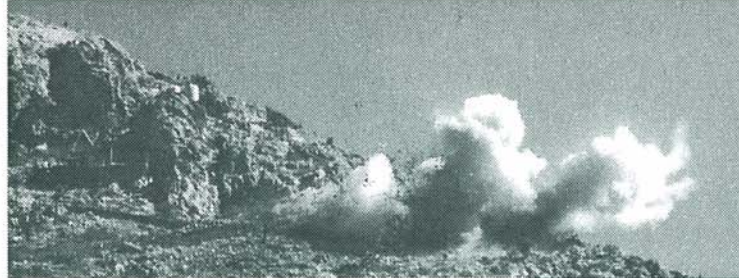

“THANK\$!”

NOTE: It's written that Earl Dorr was originally given a map by two men who PRECEDED his RE-discovery of the much earlier cavern discovery. Considering the complex, precise, inconspicuous nature of the “markers”, and the sheer physical effort needed to set 10 of the boulders, it's reasonable to assume they were mapped. But we don't know by who, when, why or what they indicate. ... more RE-search is needed !!!

VIEW LOOKING SOUTH FROM ON TOP OF THE OLD ZINC MINE

A two-foot wide void with air flow has been drilled into by Charlie Powers. Just 60 feet in from the arrow at Drill Site G-65, the strata runs N-S, from the direction of Earl Dorr's old “Proposed Tunnel” (behind the photographer), and up (south) to the dotted line central to the marker-rock area. If a hidden passage is **that close** to blasting in the old zinc mine it probably would have been damaged. With a passage potential closer to the zinc mine than ever suspected before, it may account for Earl Dorr being upset about the blasting!

© 1999 E. I. NV and R. E. LEWIS = cocoweep@aol.com

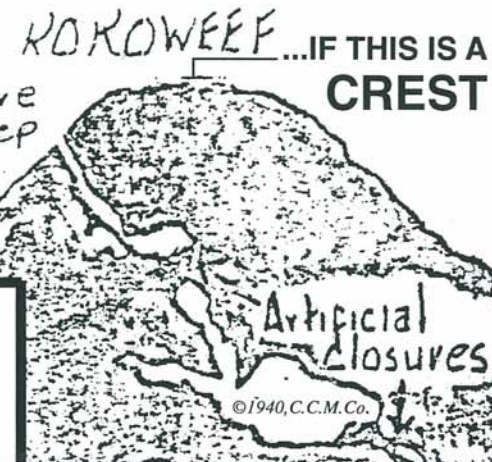

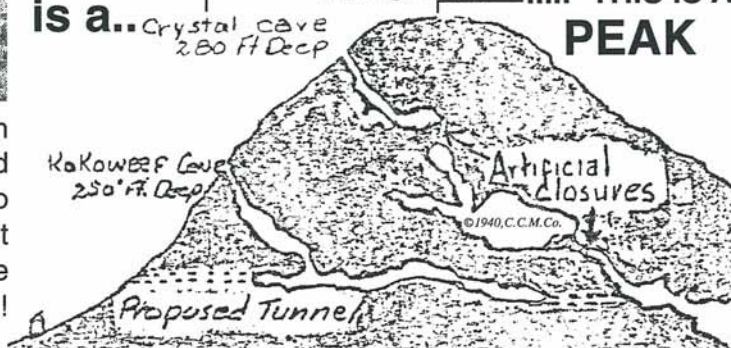

WEST
is a ... Crystal cave
280 Ft Deep

CRYSTAL CAVE :
“EAST vs. WEST”

The OLD, familiar Crystal Cave, on Kokoweef Peak's **EAST** side, has several facts that don't match Al Masters' writing of “DORR's Crystal Cave” = (circles 1-16) from True Treasure July, '70

- _A - The entrance is a rounded **hole**.
- _B - A rope is necessary starting at the surface since it **begins vertical**.
- _C - “Dorr” is smoked **twice** and only in the **second** level down.
- _D - Going down to the 2nd level is **VERTICAL** and needs a rope again.
- _E - “pools” of **crystals** have never been found in a side passage.
- _F - It has no small, natural tunnel with air flow & ...
- _G... - It isn't even close to 280 ft. deep.

EAST
is a.. Crystal cave
280 Ft Deep

- ① Earl's entrance was “only a crack”
- ② It soon expanded into a small chamber.
- ③ After the 1st chamber it's **straight down** and a rope was necessary to get ...
- ④ 70 feet down to the “ first level ”
- ⑤ Here was a room about **20 feet wide** He smoked “**DORR**” on a wall **70 ft. down**
- ⑥ Next passage is **not** vertical - no rope was needed for the 2nd 70 ft. down
- ⑦ An overhang made it hard to reach the
- ⑧ bottom before getting to this 2nd level
- ⑨ A 2nd small room was here also.
- ⑩ ...a small passage went to the side to ...
“**dried up pools**” with **CRYSTALS** !
- ⑪ In one nearby room was
- ⑫ a tunnel so small Dorr was afraid to go through, but... (from another account) ... he felt air flowing so he went through to the end where the crawlway opened up into a
- ⑬
- ⑭ **HUGE** cavern with a “500 foot long” stalactite hanging from the top
- ⑮ No way found off shelves into the cavern
- ⑯ ...but the cave went on for miles !!!

MAGNETOMETER Reaffirms Hidden Passage Potentials at EM-83 Site

...lends credibility to rock placements & triangle mapping patterns

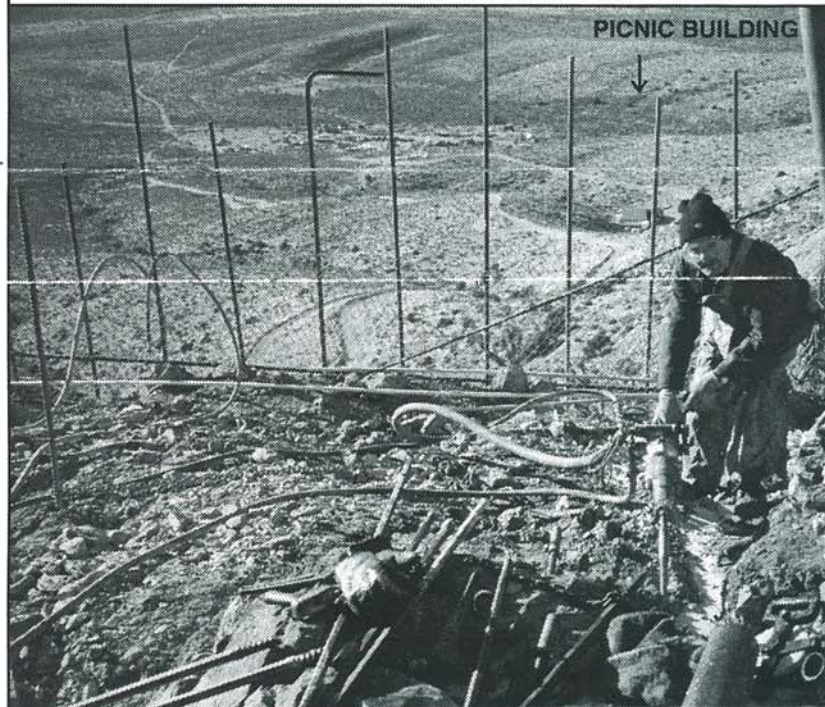

LOOKING WEST ACROSS THE BRUSHY AREA OF THE EM-83 SITE

THE PLOT THICKENS! An amazing correlation is slowly unfolding between the stone-line triangle patterns and the **in-visible** information seen only through electro / magnetic surveying. This suggests someone may have previously had a measured knowledge of something presently inaccessible to us.

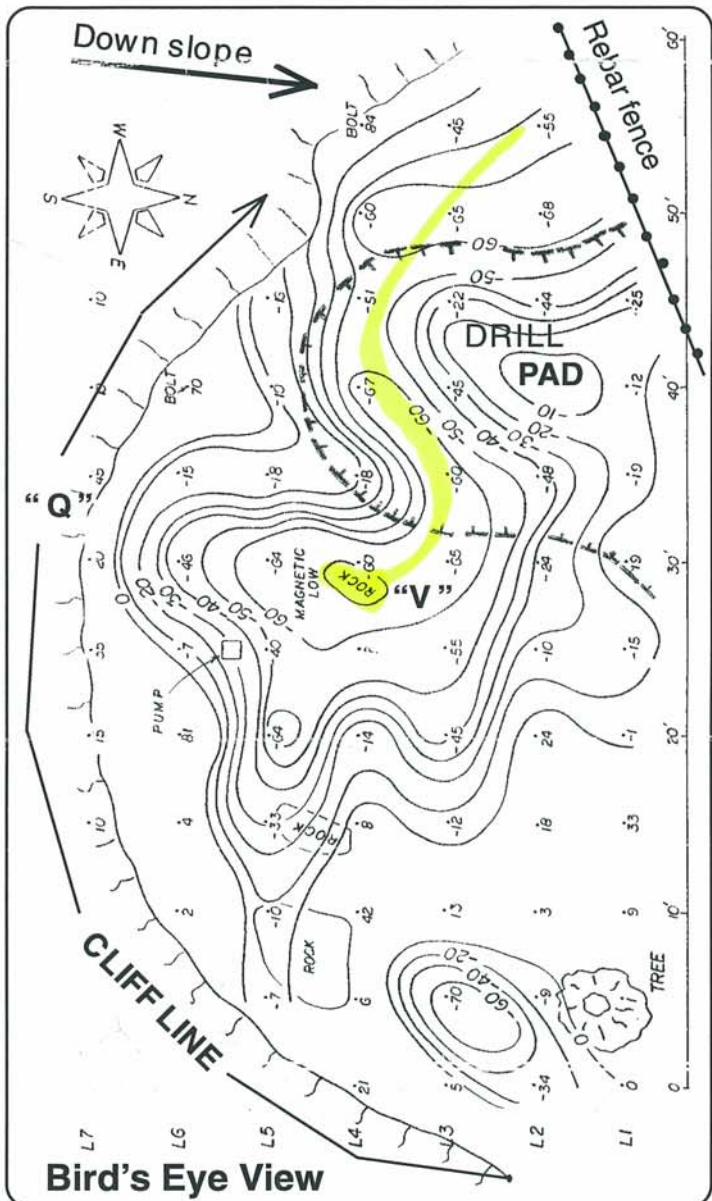

DIAMOND DRILLING WILL FIND THE FACTS !

At the PICNIC, there will be an OUTSIDE DISPLAY overlaying an aerial photo with electro & magnetic mapping plus photos of stones in the "stone-line Triangle-Map." Also, a 3-D model of the site will be on display as well. Use of a high power, WW II spotting scope will be available to enable seeing large marker rocks at the upper site through tremendous magnification .

Be curious! Come to the PICNIC Sunday, June 6 th !

ABOVE: Charles Bouch helped drill & blast out a FLAT PAD for diamond drilling. Behind him rebar rods, drilled 12" into rock, supports chainlink fencing to hold in leveled backfill. Far in back are the basecamp and PICNIC buildings. Charles knows it's NO PICNIC drilling in winter at Kokoweef's windy 6,000 feet elevation. THANK YOU, CHARLES !!!

ABOVE: Magnetometer mapping at the EM-83's electronic survey area (photo) indicates a possibility for a cave deep under marker-rock "V". Notice "Q", the "missing marker", on our aerial photo's "stone-line triangles" is also curiously located. (previous newsletter)

DIAMOND DRILLING EXPENSES ARE FOCUSED ON THE LONG HAUL! MAINTENANCE, MONEY & MORE DRILLING

Recent Successes Raise Confidence and Expectations

"**FINALLY !**", Larry Butler ("L.B.") exclaimed after spending 2 months drilling **UP** 500 feet and out to the surface. (photo) They were only 84 feet downslope from their intended target which is pretty darn good from that distance! This success has given us **certainty** of where we are physically and allows **more accuracy** for drill alignments when drilling toward our mapped electronic targets. Now, plastic pipe has been installed in the drill hole as a **non-freezing** waterline way high up on the mountain above the Red Hole. - a very practical benefit! See? Even **UP** is good !

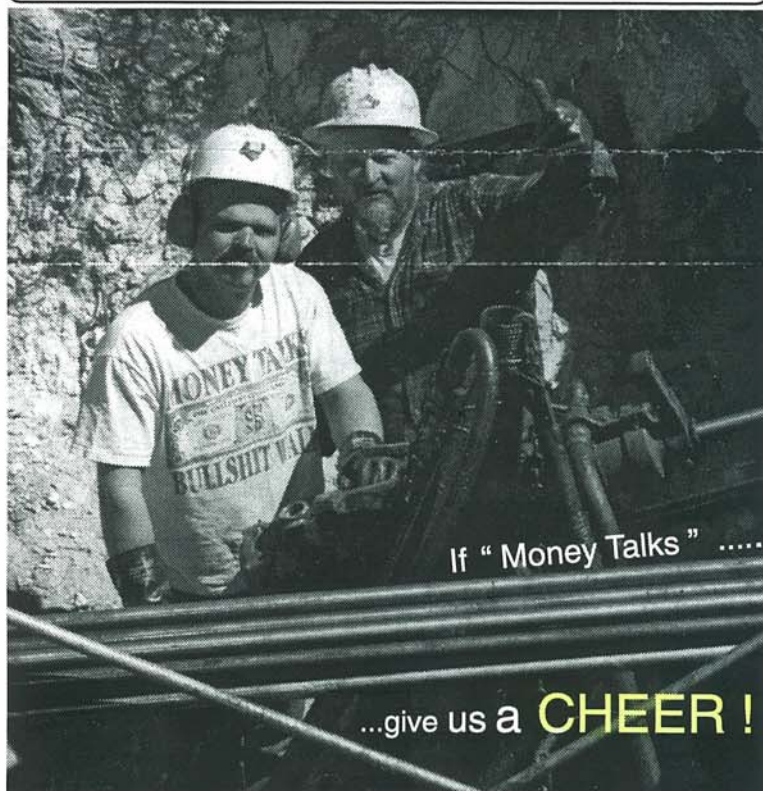

WHAT'S NEXT ?

We **NEED** your **financial help** for fuel, more drill steel, new drill bits, a cable-lift system up to **Cathy's Cave**, purchase of another air compressor, camp supplies, maintenance expenses, annual claim and lease fees, etc. In a phrase, it's:

Let's Drill, Drill, Drill !!!

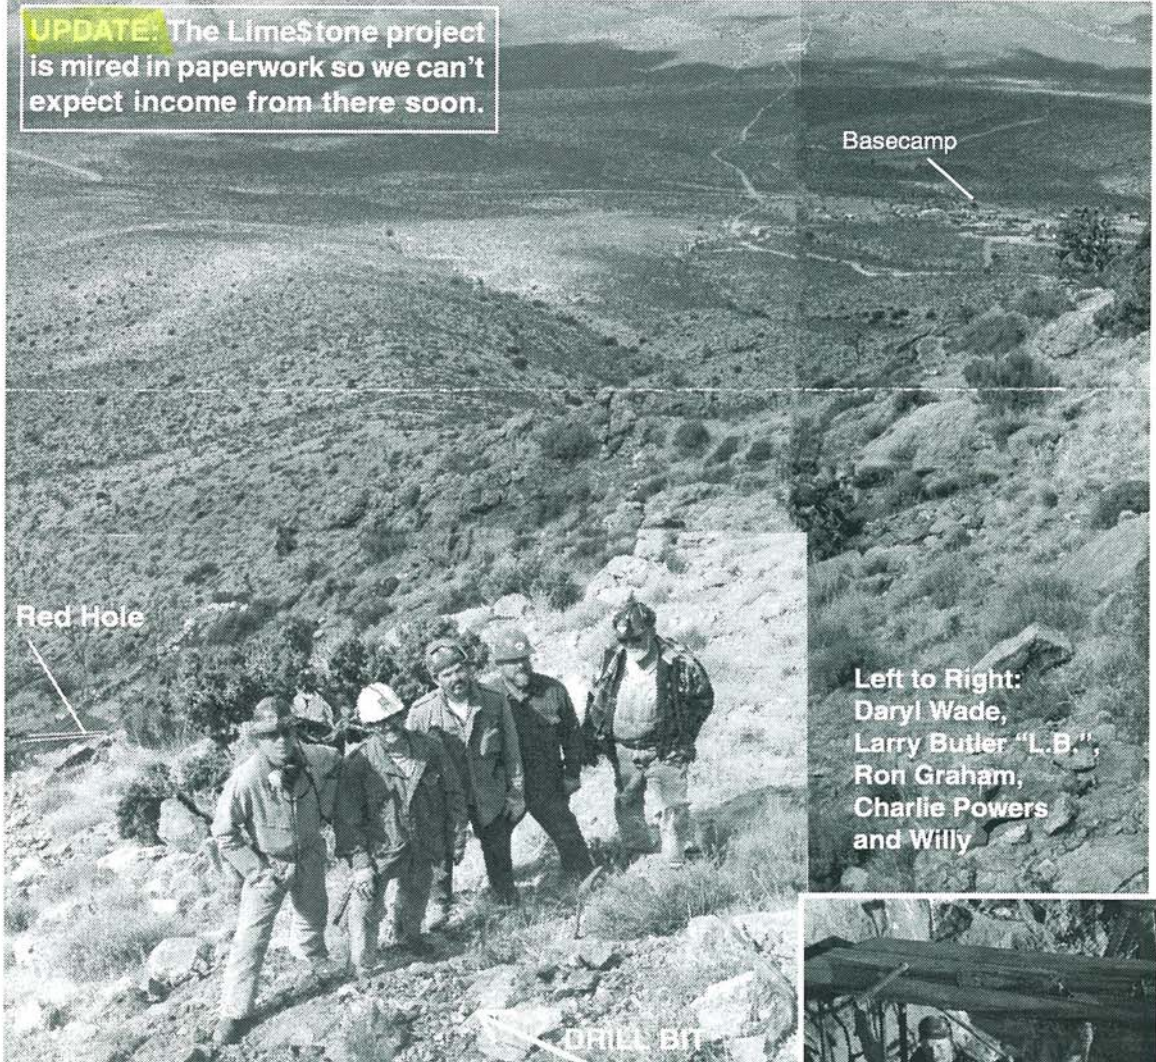

We plan to set up at least **3 more turn-key diamond drill sites** for a **total of six** with plenty of spare parts. Some of our working investors take their long weekends "off", after work, so we need 'em ready to go the instant they arrive for maxi-

Charlie Powers is thumb-up 100% after drilling into a **6 foot void with air flow** at "Site G." For anything to happen onsite, the message on Ron's T-shirt sums things up pretty well. It takes your **MONEY**, men and machinery to get the jobs done !

...give us a **CHEER !**

UPDATE: The LimeStone project is mired in paperwork so we can't expect income from there soon.

Left to Right:
Daryl Wade,
Larry Butler "L.B.",
Ron Graham,
Charlie Powers
and Willy

mum exploration. Even then some folks wonder, "Why does it take so long? Well there's a whole lot of maintenance and improvements needed among the hundreds of daily actions necessary to save **time, money and muscles** to enable any drilling at all! For instance, this past **winter... (Brrrrrr !)**,

volunteers like L.B. and a few from the "Who's Who" list have also: Built a 4WD 1,000 gallon fuel delivery truck, installed a 15,000 gallon water tank at basecamp, turned the boom-truck into a mobile, heavy duty repair vehicle, installed a great 30 gallon/min Bean waterpump with auto shutoff up to the mine. They're busy **AND** volunteers ! Yes, it takes a special kind of people to make our quest work. We can all pitch in; money, effort or encouragement; a little or a lot ; on or off-site. We especially help each other when we express our patience & appreciation for what everyone contributes through a sincere and positive spirit.

"Patience is a virtue ...

..... few possess ! "

Let's celebrate our progress !

COME TO THE BUSINESS MEETING & PICNIC ON JUNE 6TH FOR **THE REST OF THE NEWS !!**

Remember, "**the bottom line**" is always yours.

The *bottom* line is for ...

YOUR future success **AND** to say We need & appreciate your help!

ThankYou !

Charlie Powers is thumbs-up after drilling down, down, down with help from Ron & Charles Bouch (left) and Ralph's survey. He drilled down 250 ft. to the tunnels below, for a water-line hole, and got it on the first shot ! **WAY TO GO CHARLIE. THANKS!**

YOUR VOLUNTEER'S WHO'S WHO LISTING.

Our tireless leader:

Larry Hahn

At camp: Charlie Powers, Jim Serrill, Larry Butler, Ralph Lewis, Ron Graham

Regular weekenders:

Willy & Joyce, Jerry McKee

Special services:

Walt Lueth, Frank Williams, Denny "Deke", Ron Dent

Visiting helpers: **Stew Finlay**

Daryl, Vince, John Stommes, Frank, Henry McIntyre, Norm

Off-site Projects/errands:

Skip Wynia, Russ Graham, Wayne Haskell

Please keep your volunteers working by **SUPPORTING OUR PROJECT\$!!!**

This is a ***SPECIAL REQUEST*** to all investors:

Investors, who have regularly supported on-going projects are greatly appreciated and to all of you we say: "Thank you !" We depend on you! While we cannot guarantee success in our quest at any particular instant, our newsletters' purpose is to accurately report insights, activities & discoveries to inspire confidence in our expanding explorations. It is primarily published to motivate your continued, voluntary investment for support of operations necessary for our success. REMEMBER, large or small, any and all money sent to Explorationas Inc., goes toward your total stock investments at \$6.00 per share!

Though all investors are being mailed the newsletter, many are not choosing to maintain an "active" investor status. **Please tell us why.**

"Active" investors are those who have invested in the last two years."

Only a few newsletters we mail are ever returned to us by the Postal Service. Therefore, we know most active investors and "dormant", past investors are receiving them. However, publishing newsletters is not an obligation of the Corporation and they are not intended to be solely for "entertainment" without fulfilling our basic need of **raising funds** to cover our necessary expenses. They take productive time and use investors' money which needs to be balanced with their effectiveness for raising money.

Please answer the question below by checking "ACTIVE" or "INACTIVE." BE SURE AND **RETURN THIS PAGE TO US**, USING THE enclosed, pre-stamped and addressed return envelope.

Investors are **not required** to be on the newsletter mailing list. ... BUT

IF YOU DO NOT RETURN THIS SURVEY FORM YOUR NAME
WILL BE **AUTOMATICALLY** REMOVED FROM THE
NEWSLETTER MAILING LIST AS BEING "NOT INTERESTED."

This is solely a test of cost-saving ideas to see if it will save money. Our next newsletter is being scheduled for May 2000. Due to the fact that we have such poor returns after the Holidays, and before April taxes, Larry Hahn, President & Treasurer, believes it might be better to print 2 newsletters, 6 months apart, in October and May. Therefore, we need your **extra-special willingness to help carry us through a longer period of time !!!**

Help keep us **HOT** on the trails to
new discoveries !

Q. Which investor status do you wish to keep?

☐ **INACTIVE:** I understand that this choice does NOT effect my current investment's TOTAL but that the newsletter will be discontinued.

☐ **ACTIVE:** ... and keep sending the newsletters

Please accept my additional investment of:

☐ \$25 ☐ \$50 ☐ \$100 ☐ \$_____

..... even a little bit goes a **L O N G** way !!!

Please **PRINT** YOUR NAME _____

Signature _____ Date / / '99

All investors **WILL STILL** be mailed the required notice informing them of the date, time and place of the **annual investor's meeting**.

Survey Questions: Please **CIRCLE**

In the past 3years, how have the newsletters effected your overall investment decisions?

- INCREASED
- NO CHANGE
- DECREASED

Do photographs help you understand our news?

- YES - NO

Are newsletter layouts too confusing?

- TOO COMPLICATED
- ABOUT RIGHT
- TOO DULL

Would you prefer reading only text?

- (words only / no photos)
- YES - NO

Would you prefer smaller, 2 page, newsletters four times a year?

- YES - NO

If nearby, would you be interested in volunteering for easy projects on site?

- YES - NO

Due to both curiosities and uncertainties regarding the inconspicuous stone triangulations and Ralph's marker-rock theory, presented in the Spring '99 newsletter, additional written details of supportive information are available on request.

Help us keep this newsletter and our projects alive with **COMMUNICATION !**

Please **UPDATE** your Phone, Address, E-mail or future information ...

....on the back of this page ...

Along with your :

suggestions,
comments,
questions or
observations

"As long as you are generous and true you will not hurt the world."

- Winston Churchill
