PICNIC EDITION

SUMMER 2000

..... for all investors helping to find the legendary River-of-Gold

KOKOWEEF PEAK
(Private Property)
Mt. Pass, CA

WE'RE SEEKING SHORT-CUTS TO SUCCESS! ... DIRECT DRILLING FOR AIR FLOW & THE DEEP CANYON IS POSSIBLE

IT'S PICNIC TIME !

It's always good to see supportive investors and curious visitors at camp. So we're hoping you'll join us at the "feast" this year to hear our latest news & plans, to ask questions and **VOTE** for your Board of Directors.

Whether you can be an active investor now or not, any current developments **always** "stand on the shoulders" of earlier investors. So, be sure, you're welcome to enjoy good friends, food and news at our annual picnic on **SUNDAY, JUNE 4th** !

One way old and new investors actually "work together" was demonstrated after investors enabled purchasing a **great camera** for inspecting earlier diamond-drill probe holes. **This camera is a DANDY !** Recently, it "rescued" an old (pre-camera) project by proving an electronic target, in the last newsletter, was **mis-labeled** as: "High Resistance Rock / Mineral." From drilling alone, we believed we only found solid rock but, after the camera arrived, it clearly **SHOWED** there **IS** a void where a void was electronically mapped. Seeing is believing and the **partial** void we see is about 1 ft. wide & 10 feet long! Another thing of certainty is that the aragonite crystals seen in the void is **proof** air-flow has existed there for a **long** time. More drilling and camera work will

show if there are more cavern surprises on either side.

Another place we'll be RE viewing with this new camera is "Steve Clemens' **2nd Chimney**." It's **DEEP** inside Kokoweef Peak, it's **140 ft below the track level** of the old *Crystal Cave* network AND it "**breathes**" a **high volume of air** through a 10 inch wide fracture. This is **good evidence** for large caverns below but, since the opening **twists out of view** using unaided eyesight, who knows? The camera's 600 foot, flexible "snake cable" will allow us to look farther to **SEE** if it widens into a large cavern. Fortunately, no extensive excavating is required at Steve's 2nd Chimney.

The next project to be REviewed is a 6" hole drilled 12 years ago, in the **middle of the base camp**, to a depth of 237 feet. At that depth, **all the drilling air disappeared** into a crack linked with some large volume. Air at 2,400 cubic feet per minute, under 250 pounds of pressure, was being pumped down with **no back pressure for over five minutes**. But, then the drill **got stuck**, it **got expensive** and the driller **got outta** there! Finally, we'll get to **SEE** what's at the bottom of that old hole with our new camera !

Whether you're an old or new investor, **friendship and goodwill** still remain "the best investments with the best returns." This was the case as

it relates to Willard Dorr, Jr. He was a **nephew** of Earl Dorr. (His Uncle Earl wrote the 1934 affidavit describing the legendary "River-of-Gold.") During a visit with Willard Dorr, shortly after last year's picnic, Willard was shown the photos & a map of the marker-rocks found on Kokoweef. Even months later, in spite of an illness, Willard kept his engineer's curiosity about those set-stones. Sadly, he passed away last January. But, before entering the hospital, he **insisted** your editor accept his new surveyor's transit as a gift. He believed it would be helpful to "**... finish the work you started with those marker rocks!**" And Willard was right because his kindness soon became a catalyst for discoveries.

Previously, it was believed the concentration of set-stone markers were only related to some **LOCAL** potential at the Brushy Area (Site G-68). But, by sighting in with the 20X telescope on his surveyor's transit, it was discovered our "marker-map" involves a much larger area. (**See photo above**) Those "local," short-line markers were originally set with **extreme precision** because they **lined up exactly with more set-stone markers over 2,000 feet away!** All their mysteries haven't been solved but **the markers seem to be related to the MAJOR Infra-Red Fault running under the base camp.**

..... **THAT'S interesting !**

... continued on back

Annual Picnic !
9:30 AM at KOKOWEEF

Sunday, JUNE 4th

WE NEED YOUR HELP TO FUND DEEP DRILLING AND DETERMINE IF EARL DORR'S GOLD CANYON & RIVER ARE HIDING ABOUT 1,400 FEET BELOW BASE CAMP'S INFRA-RED FAULT.

OUR DRILLER'S *LARGE DRILL* ONLY NEEDS \$\$\$ TO GET IT TURNING !

Brains & muscles were required to **precisely set** the 48 markers found so far. And 11 of them are **between 200 to 1,000 pounds!** That extent of work suggests they were probably mapped & may relate to something important or valuable closer to basecamp. Recent magnetic surveys show big anomalies there just begging us to drill once BLM permits are issued.

Larry Hahn has found just the right combinations for us in a **LARGE** drill operated by *REDDING DRILLING* in Las Vegas. They have a **brand new rig** that can drill a **6" hole 2,000 ft deep!** At a **special rate of \$10 per foot**, this deal is excellent for a rig having this capability! It's **IMPRESSIVE** to see them drill down 100 feet every hour! *At the right spot 20 hours = 1 canyon.*

-- SEE this drill in operation! --

They will be drilling **June 3rd**, the **day BEFORE** the picnic, **BUT** only in

the **MORNING** on **Sunday June 4th**.

Right now we're confident the base camp's **Infra-Red Fault** best matches the **DEEP** geology necessary to form the underground canyon described by Earl Dorr. This is based on geology, history and field surveys that suggest *Kokoweef is the bullseye for Earl's hidden cavern-canyon-river.*

Two important clues, not found in *treasure magazines*, are attributed to Earl Dorr from old-timers' accounts:

- **1.** Earl was trying to get hold of mining claims from "a Mr. Little" even after Earl had blasted an entrance shut and after Kokoweef's Carbonate King Zinc Mine ceased production. **In Earl's era, John Q. Little was the ONLY "Mr. Little"** in the County's mining records and **THAT Mr. Little** was leasing claims **AT Kokoweef.**

That's significant!

- **2.** Earl also proposed running a shaft, by a **vertical** "drop-fault", on **Mr.**

Little's claims **AT Kokoweef**, to access the canyon for mining the gold. Earl's engineer estimated the shafting would cost \$250,000.⁰⁰ That doesn't provide an exact location but it does indicate **it's DEEP !** And **NOW**, our electronic surveys show the **Infra-Red Fault** goes down **VERTICAL and DEEPER than 1,100 feet!** So,?

*WILL YOU HELP US HIRE
A PROFESSIONAL DRILLER
USING THIS BIG-RIG
FOR DEEP DRILLING ?*

*THE MATH IS SIMPLE, SO...
PLEASE, LET US KNOW.
FUNDS ADDED TOGETHER = ?
... THE DISTANCE WE'LL GO !!!*

\$10.00 = 1 ft

\$50.00 = 5 ft

\$100.00 = 10 ft

\$500.00 = 50 ft

\$1,000.00 = 100 ft

\$2000.00 = 200 ft

\$5,000.00 = 500 ft

\$10,000.00 = 1,000 ft

\$20,000.00 = 2,000 ft

**200 people X \$100.00 =
\$20,000⁰⁰ = 2,000 ft
= THE CANYON ?**

... OR a VERY deep water well !

... AND REMEMBER :

OUR NORMAL OPERATING EXPENSES ALSO INCLUDE :

5000 gallons (off-road diesel) = \$7,500.00
10 diamond drilling bits = 4,000.00
5 diamond reamer shells = 1,250.00
500 feet of drill steel = 3,750.00
Camp expenses : = 5,000.00
repairs, rent, insurance, = \$21,500⁰⁰
food, annual BLM fees, etc

The greatest use of life is to spend it on something that will outlast it.

- William James

FOR THE PICNIC: We'll supply the hot dogs, hamburgers, buns, condiments and sodas. If you live locally, please bring your **FAVORITE** covered dish. And don't forget your sunglasses, sun tan oil, binoculars, flashlights, windbreakers **AND WALLETS** ...
... because T-shirts, photos and souvenirs will be available.

DRIVING TO KOKOWEEF ?

From Vegas: Take I-15 South, past Primm Valley Casinos and go up past the Nipton Rd. sign and exit at BAILEY ROAD . Go left across the bridge **AND** cattle grating, then left on 1/2 mile of pavement, continue on dirt road and follow signs for 4 miles up, up, up to the flat land ... Kokoweef Peak is seen to your left.
From Baker, CA : I-15 North, up past Halloran Spring & Halloran Summit, down past rest area and Cima Rd, up & exit BAILEY ROAD. Go right, follow signs
